

This high performance screw from *ITW* adds additional value to your products. The unique thread was developed utilizing the *ITW WERCS* Technology. This technology allows *ITW* engineers the ability to design threaded fasteners that can be pre-assembled to any given position. Now fasteners can be assembled in an “open” or “*Field Ready*” position. The end user has only **ONE STEP**: just tighten the screw in place.

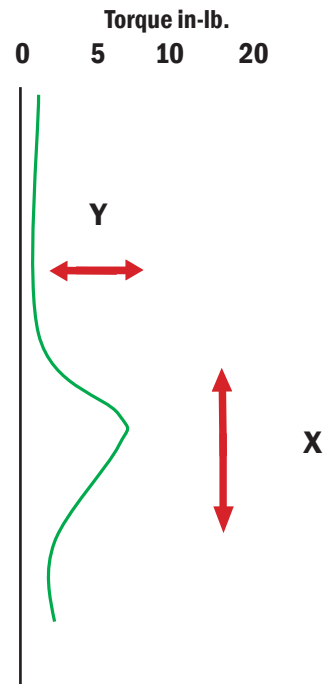

See the Difference....Feel the Difference....Realize the Value

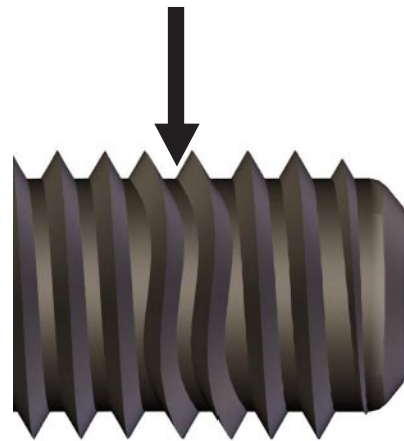

Benefits of the SSX Field Ready Fastener

- Tunable Torque provides engineers with ability to design fasteners for specific application and end use requirements.
- Sinusoidal thread pitch can be positioned at any place along the thread of the fastener.
- The fastener functions in standard tapped holes without damaging mating threads.
- Reusable with consistent, repeatable performance.
- Available in standard machine screw sizes.

The tunable sinusoidal thread pitch can be controlled by both amplitude (Y) and duration (X).

This allows *ITW* engineers to meet any application requirement.

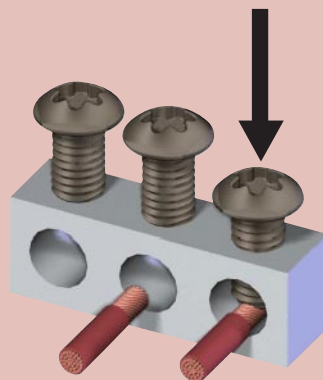

ITW Engineers continue to provide you with fastening solutions to improve your products.

Responsive people who understand products and processes.

For innovation turn to the leader, turn to *ITW*.

**One Step.
Drive the Screw
Into Position.**
